The Case

Context

Shop-EY is a global retailer specializing in household and everyday consumer products, **with operations across 13 countries**. Using historical data from public e-commerce, marketplace, and fintech companies between **2015 and 2026**, the company wants to assess the performance of its existing markets to determine where additional investment could drive the greatest business value and where it may be beneficial to reduce its presence or exit the market. Shop-EY aims to leverage data and AI to better understand **market dynamics, customer behavior, operational efficiency, and growth opportunities** in order to **optimize its international expansion strategy and allocate resources more effectively**.

Objective

Your objective is to **analyze the available data and propose an AI-enabled data solution** that helps Shop-EY better understand, monitor, explain, or **predict their performance in the market**. Based on your analysis, **you will identify key insights and develop strategic recommendations to support decision-making and improve business outcomes in this market**. You are free to choose the direction that best reflects your skills, including BI and self-service reporting, data engineering and modelling, predictive analytics or machine learning, GenAI or agentic AI, customer analytics, operational optimization, or a combination of these approaches.

Analyze

- Analyze at least one (1) datasets provided by the client (e.g., company, prices, financials, etc.).
- You are permitted to supplement your analysis with external datasets where relevant. If you do so, mention your sources.
- As part of your solution, you must build at least one (1) technical artifact using the tool(s) of your choice. Examples include dashboards, visualizations, AI models, GenAI applications, agentic workflows, data models, analytical applications, or other data- and AI-driven solutions.
- You can focus on a specific challenge or topic; it is not necessary to address every area.

Submission

- Prepare a 10-minute PowerPoint presentation (in English or French), followed by a 10-minute Q&A session.
- Your PowerPoint should include defined structured sections and a clear narrative (for example area of focus, insights, recommendations , approach and solution, etc.)
- Include any supporting documentation you deem relevant (e.g., Power BI screenshots, notebook exports, code files, architecture diagrams, etc.).
- Submit all materials in a single ZIP file before the deadline indicated in the email.
- Candidates may use AI as part of their solution and should be prepared to demonstrate and explain how AI was leveraged and the value it contributed.
- Estimated time to complete the assignment: 3-4 hours.
